

Cooling System Maintenance

What Our ASE Certified Technicians Do

The following components are inspected. Their condition is recorded and compared to manufacturer's specs. Recommendations are made per the Motorist Assurance Program Uniform Inspection Guidelines:

Heating and Air Conditioning Systems

Visual Inspection

- Interior controls and blower
- Radiator coolant level, hoses, pressure cap and thermostat
- The A/C compressor belt for condition and tension
- Leaks or other damage
- Component condition, leaks or damage

Heating and Air Conditioning Tests

- Pressure test engine cooling system
- A/C system pressures are measured and compared to manufacturer's specifications
- A/C system is leak tested
- Both the heater and A/C are performance tested by checking the outlet air temperature at the discharge vents
